

WYNN Single-User and WYNN Non-Network Multi-User Software Activation

Software activation is an easy, one-time process that uses a 20-character Authorization number to help Freedom Scientific verify your product's license. It is the last step you perform when installing your WYNN single-user or WYNN non-network multi-user (NNMU) product. When activating over the Internet, software activation can be completed in a matter of minutes, which then allows you to use your WYNN product.

1. Do one of the following:
 - For the WYNN single-user program, insert the WYNN Authorization CD into your CD-ROM drive, and choose **OK** to copy the Authorization number to your PC. Remove the Authorization CD.
 - For the WYNN NNMU program, an Authorization CD is not provided since Authorization numbers are supplied on labels. Assign one label to each PC that will use the WYNN program, and enter that Authorization number into the Authorization number edit box when prompted. This will occur when you reach step 5 below.
2. Install the WYNN program using the WYNN Program CD.
3. Install the AT&T Natural Voices speech software using the AT&T Natural Voices CDs.
4. Start the WYNN application. The first time you start WYNN, the WYNN Activation dialog box appears. There are three major ways to activate your Freedom Scientific product: quickly and independently over the Internet; with assistance from customer support using telephone or fax; or by employing the help of a third party.
5. To activate using the Internet, choose the **Activate** button and select the **Now, using the Internet (Recommended)** option. Choose the **Next** button and follow the instructions that appear on the screen. (For the NNMU, you must enter a 20-character Authorization number from the supplied labels for each computer that you want to authorize.)

For more information about product activation, including details for activating using telephone, fax, or third party, refer to the following sources:

Network WYNN Software Activation

The Network WYNN installation and activation process requires a one-time setup and configuration of network components, which then permits the installation of the WYNN program onto numerous client computers. To simplify operation, either the WYNN server or a computer on the network is designated as the license server. Its task is to distribute tokens to client computers, thereby eliminating the need to activate each client on the network individually.

To install Network WYNN and activate network components:

1. Insert the Network WYNN program CD into the server's CD-ROM drive, and install the Network WYNN software.
2. Select a computer on the network that will serve as the license server, insert the WYNN Network Authorization CD, and install the license server software.
3. Activate the license server computer using the Internet.

For example, from the **Start** menu, choose **Programs** or **All Programs, Freedom Scientific, Network**, and **Update WYNN X Authorization** (where X is Wizard or Reader). Next, choose the **Activate** button, and select the **Now, using the Internet (Recommended)** option. Choose the **Next** button and follow the on-screen instructions.

4. On the network server, create a WYNN user group and configure user permissions.
5. From each client computer that you want to run WYNN from, browse to the server and run the setup.exe file (located in the WYNN Wizard Eng or WYNN Reader Eng folder) to install the WYNN software on the client computer.

For example: \\file server name\WYNN4nw\WYNN Wizard Eng\Setup.exe.

6. When complete, insert an AT&T Natural Voices CD into each client's CD-ROM drive, and follow the on-screen instructions. Repeat this step to install additional voices. Remove the CD when complete.

You can install the WYNN client on as many workstations as you want. The number of clients that use WYNN simultaneously is limited by the total number of tokens available on the license server. For more information about product activation, refer to the following sources:
